Carbon Reduction Plan

Supplier name: Lean Tree Limited

Publication date: May 2026

Commitment to achieving Net Zero

Lean Tree Limited is committed to achieving Net Zero emissions by 2050.

As a further commitment, we have also set an ambitious company goal targeting 2027 to achieve a carbon neutral status, ahead of the UK Government's Net Zero target date of 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any specific strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline emissions were calculated for Lean Tree Limited (LTL) for the financial year 2024. LTL has recalculated estimated emissions for the financial year 2025.

Baseline Year: 1 Oct 2023 - 30 Sept 2024
Additional Details relating to the Emissions calculations:
LTL has no Scope 1 or Scope 2 emissions to report, in accordance with the SECR reporting requirements, as there are no direct emissions from sources that are owned or controlled by the company, nor indirect emissions from the generation of purchased energy consumed by LTL. LTL have considered all scope 3 emissions, in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard, i.e. indirect emissions occurring from sources owned or controlled by other entities in the value chain of LTL. LTL have assessed the applicability of all 15 categories detailed, including the five categories specified in

PPN 06/21, and the three categories generating LTL's emissions are 6. Business Travel, 7. Employee Commuting (in which homeworking has been included), and 8. Upstream Leased Assets. There are no emissions to report related to 5. Waste generated in operations (and any waste as a result of upstream leased assets has been included within 8), or 4. Upstream transportation and distribution, and 9. Downstream transportation and distribution, as there was no transportation or distribution of purchased or sold products in the year to the end customer, retail, or storage.

Emissions from travel and transport have been estimated with reference to expenditure data where usage data is not available. Emissions from leased assets have been estimated with reference to environmental reporting obtained from the Lessor, a certified B Corp, who calculate usage as a percentage of office size compared to the whole building which accounts for our share of communal spaces and meeting rooms as well as office spaces.

Government conversion factors for company reporting has been used to state the GHG emissions. These figures have been presented in tonnes of carbon dioxide equivalent (tCO2e) which is the universal unit of measurement to indicate the global warming potential (GWP) of GHGs, expressed in terms of the GWP of one unit of Carbon dioxide. We have used the version of the factors that correlates with the data on which we are reporting. As the reporting year spans the calendar year, the factor from the calendar year in which the greatest portion of the data falls, has been applied.

The carbon reduction plan will be updated annually, and any changes or developments to methodology will be disclosed in future reporting. All known sources of environmental impact have been included within the reporting boundary, and there are no specific exclusions to disclose.

LTL will recalculate base year emissions if there are significant changes in the company structure or methodology as appropriate.

Baseline year emissions: 1 Oct 2023 - 30 Sept 2024

EMISSIONS	**TOTAL (tCO2e)**
Scope 1	**0**
Scope 2	**0**
Scope 3 **(Included Sources)**	**4. Upstream transportation and distribution - 0** **5. Waste generated in operations - 0** **6. Business Travel – 43.15** **7. Employee Commuting – 16.9** **8. Upstream Leased Assets – 1.21** **9. Downstream transportation and distribution – 0** *All remaining Scope 3 categories have not been detailed as there are no emissions to report for those categories.* **Total 61.26 tCO2e**

Total Emissions	**61.26 tCO2e**

Current Emissions Reporting

Reporting year emissions: 1 Oct 2024 - 30 Sept 2025	
EMISSIONS	**TOTAL (tCO2e)**
Scope 1	**0**
Scope 2	**0**
Scope 3 **(Included Sources)**	**4. Upstream transportation and distribution - 0** **5. Waste generated in operations - 0** **6. Business Travel – 24.14** **7. Employee Commuting – 23.53** **8. Upstream Leased Assets – 1.17** **9. Downstream transportation and distribution – 0** *All remaining Scope 3 categories have not been detailed as there are no emissions to report for those categories.* **Total 48.84 tCO2e**
Total Emissions	**48.84 tCO2e**

Emissions reduction targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

We project that carbon emissions will decrease over the next five years to 43.96 tCO2e by 2030. This is a reduction of 10% against our current reporting year emissions, and a 28% reduction against our baseline year.

Carbon Neutral Status

Lean Tree Limited has partnered with Ecologi since July 2021. During the financial year 2025, the partnership with Ecologi generated **80.03 tCO2e** of carbon avoidance activities, which is greater than the total estimated emissions generated by the business in the same period.

Lean Tree Limited pledges to continue their partnership with Ecologi and to continue to pursue carbon reduction initiatives internally, as detailed below.

Lean Tree Limited also pledges to look towards achieving formal accreditation for net-zero status to confirm this position.

Carbon Reduction Projects

The following environmental management measures and projects have been completed or implemented since the 2024 baseline.

The carbon emission reduction achieved by these schemes equate to 12.42 tCO2e, a 20% reduction against the 2024 baseline and the measures will be in effect when performing the contract.

Completed Carbon Reduction Initiatives (This Reporting Year)

- We began an implementation of an Environmental management system (EMS) in anticipation of aligning with, and achieving ISO 14005 accreditation in the calendar year of 2025.

- In March 2025, Lean Tree signed the 'SME Climate Commitment', which is a global initiative to provide SMEs with a pathway to join the 'Race to Zero' campaign and empowers them to take climate action, providing a globally recognised climate commitment and tools and resources to build resilience and power further progress towards Net-Zero and a more sustainable future.

- All Lean Tree employees now have access to our newly launched professional learning and development platform to facilitate all employees in building a comprehensive understanding of ISO14001, as well as Lean Tree's EMS. The platform aggregates content from over 250 training providers into a wide-ranging library and provides modules and learning courses that are aligned with ISO 14001, EPA and other environmental regulations.

- We appointed sustainability champions in 2025 who act as sustainability initiative advocates within business units, promote environmental awareness, support data gathering (waste, travel, behaviours) and assist with local implementation of controls and initiatives, among other things.

Ongoing Carbon Reduction Initiatives

- We have continued to partner with Ecologi – a certified B Corporation, who are a leading climate action platform funding high impact, high integrity climate solutions. Through our funding from the past four years, Ecologi's Carbon Avoidance Schemes have reduced carbon emissions by **299.75** tCO_2e*, offsetting our company emissions. Projects include: preserving Amazonian rainforest in Brazil, producing electricity from wind power in north-east Thailand and Solar power projects in Morocco. **As of the end of our financial year 2024/25.*

- We continue to offer our Employee Electric Vehicle scheme – which was launched In March 2023 in collaboration with Octopus, one of the leading EV salary sacrifice schemes, this scheme gives our employees access to affordable electric cars and the opportunity to reduce their own personal carbon footprint, which we encourage. Uptake of the scheme continues to be positive, and it is estimated that 12 months of our EV car scheme has saved over 4 tCO_2e, or over 2000 trees.

- We review all our policies annually to ensure they reflect our priorities as a business, and align with our environmental objectives:
    - Our Company Travel and Sustainability policies encourage the use of public transportation, cycling, or carpooling for commuting and business travel. We review all our policies annually to ensure they reflect our priorities as a business, and align with our environmental objectives.
    - Our sustainability policy also includes our approach to purchasing from suppliers displaying commitment to sustainability or offering eco-friendly products and services.

- We continue to use Microsoft SharePoint company-wide to collaborate, publish news updates and share information which helps us minimise document printing and travel.

- Our company is predominantly remote-working and utilises virtual meetings where possible, which lowers the need for employees to commute or travel, and reduces our travel-related emissions. We continue *to* rent a modest 5-seat office within a B Corporation coworking space, where we operate a hot-desk policy and within our offices we promote energy efficient practices, such as minimising waste, encouraging recycling and reusing materials, and digital communication to reduce paper usage. We also opt not to have an office printer.

Future carbon reduction initiatives

In the future, we hope to implement further measures such as:

- We are committed to reviewing our office use to ensure suitability and environmental impact.

- Continuing to develop the maturity and sophistication of our EMS.

- Continuing to review our business travel behaviours, processes and culture.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol Corporate Standard[1] and uses the appropriate Government emission conversion factors for greenhouse gas company reporting[2].

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements (where required), and the required subset of Scope 3 emissions have been reported in accordance with the

[1] https://ghgprotocol.org/corporate-standard
[2] https://www.gov.uk/government/collections/government-conversion-factors-for-company-reporting

published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard[3].

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
